

Roof Tops, Stealth and Tenant Improvements

In addition to our expertise in tower construction, STC has built hundreds of wireless antenna structures ranging from the most basic non-penetrating roof mount to the most extensive tenant improvement, as well as sites that are completely undetectable.

Our in-house construction team consists of experienced Journeymen Tradesmen. Their knowledge & skills are the result of many years of mid to high-rise commercial & public structure construction experience.

The STC team possesses and understands the essential elements necessary to build a variety of structures:

- In-house utility coordination
- In-house electrical
- Custom fabricator on hand
- STC Associates skilled in all construction trades
- Ability to work in accord with existing tenants

And we deliver what's important to your project:

- Preliminary structural analysis to ensure feasibility
- Engineering for aesthetics – structural support & optimal performance
- Quality construction with minimal disruption to existing business operations
